2. Feature overview

This chapter demonstrates a few of the features of GoPDF that can be used for report generation.

2.1. Paragraphs

Paragraphs are used to represent text, as little as a single character, a word or multiple words forming multiple sentences GoPDF handles automatically wrapping those across lines and pages, making it relatively easy to work with. They can also be left, center, right aligned or justified as illustrated below:

2.2. Tables

Priority	Items fulfilled / available
High	52/80
Medium	32/100
Low	10/90

2.3. Headers and footers

Convenience functions are provided to generate headers and footers, see: `Creator.DrawHeader` and `Creator.DrawFooter` They both set a function that accepts a block which the header/footer is drawn on for each page. More information is provided in the arguments, allowing to skip header/footer on specific pages and showing page number and count.

2.4. Table of contents generation

A convenience function is provided to generate table of contents as can be seen on `Creator.CreateTableOfContents` and in our example code on unidoc.io.
